

SM99S and SR99S Compact Single Pole Terminal Blocks – Quick, Safe, Reliable!

SM995 | SR99S

The SM99 and SR99 single pole terminal blocks are compact in design with a height of 6.6 mm and accept wire cross sections up to 1.5 sqmm. The finger push button facilitates quick and easy conductor insertion and release. An in-built inspection window allows users to check visually the conductor is inserted the connector correctly. The additional continuity test point allows the users to complied an electrical check

and confirm the correct connections are made. Packaged in Tape & Reel and suitable for reflow solder processes, the single pole terminal blocks offer maximum flexibility in PCB design due to the different orientation and placement possibilities. This means that SM99S and SR99S are ideally suited for many applications within industrial and building automation.

- > Single pole spring clamp terminal block, SMT and THR designs
- > Connection direction 90°
- > Reflow-capable
- > Automation-compliant packaging (Tape & Reel)
- > Compact design 5.8 x 6.6 x 14.5 mm (w x h x d)
- > Finger push-button

- > Visual Inspection Window
- > Continuity Test Point
- > Cable range 0.2-1.5 sqmm
- > Nominal current 9 A
- > Colour coded finger actuators
